

## **USK becomes Aumann**

### **Renaming of the Saxon automation technology specialist to Aumann Limbach-Oberfrohna**

Beelen/Limbach-Oberfrohna, 14 January 2019

At the turn of the year 2018/2019, USK Karl Utz Sondermaschinen GmbH was renamed to Aumann Limbach-Oberfrohna GmbH. The name change of the Saxon specialist for automation solutions is the logical step to complete the group's common external appearance.

Aumann, a leading global manufacturer of innovative special machines and automated production lines with a focus on e-mobility, had already acquired 100 percent of USK from Utz Group in October 2017. With the Saxon company's know-how in innovative assembly technology for the areas of e-mobility (automotive), electronics, renewable energies and medical technology, Aumann is strengthening its expertise in future-oriented manufacturing technologies.

For several years now, the company in Limbach-Oberfrohna has successfully progressed its development activities on production solutions for fuel cells. These partly patented technologies will become increasingly important in the rapidly growing e-mobility market in the future. Thanks to its expertise in the field of assembly lines for sensors and electronic assemblies, the Saxon automation technology specialist is also ideally positioned in other future-oriented key applications for mobility change.

"With Limbach-Oberfrohna being part of the Aumann Group, we have the opportunity to grow both locally and internationally. We are now also demonstrating our joint actions in the company name," says Rolf Beckhoff, Chief Executive Officer of Aumann AG. "Together we can optimally support the transformation process in the automotive industry towards e-mobility," adds Holger Kühne, Managing Director of Aumann Limbach-Oberfrohna GmbH.

The Aumann company in Saxony currently employs more than 400 staff and trainees. A total of around 1,300 employees work in the Aumann group at six locations in Germany, the USA and China.

## **About Aumann AG**

Aumann is a world-leading manufacturer of innovative specialty machinery and automated production lines with a focus on e-mobility. The company combines unique winding technology for the highly efficient production of electric motors with decades of automation experience, particularly in the automotive industry. Leading companies around the world rely on Aumann solutions for the series production of purely electric and hybrid vehicle drives and on solutions for production automation.
